

We enable semiconductor excellence.

CGI precision gearheads and custom assemblies are used in many semiconductor applications including silicon crystal growing, wafer handling robots and numerous coating processes.

Advanced Products for Robotics and Automation

CGI Motion enables design excellence across a wide range of semiconductor applications. We deliver electromechanical sub-assembly solutions ranging from wafer handling robots to silicon crystal growing applications. We are your design and manufacturing partner helping to differentiate your product, machine or innovation. Our team of problem solving engineers and product managers can bring your application to market on-time and under budget. Whether it's an improvement on a current design or groundbreaking new designs, CGI has the know how and team to enable design excellence for your semiconductor application. Connect with us today to explore what CGI Motion can do for you.
